Information on EU Regulation 2023/1115 (EUDR) (as of November 2025)

Walther Flender GmbH
Schwarzer Weg 102-106
40593 Düsseldorf

Dear business partners,

The world's forests are of central importance for species and climate protection and must be preserved. EU Regulation 2023/1115 (EUDR) is a central component of the European Union's sustainability strategy and aims to combat global deforestation. Walther Flender takes this issue seriously and is doing everything in its power to contribute to the fight against progressive deforestation.

The products we supply do not contain natural rubber or any ingredients that fall under the EUDR's relevant products.
Synthetic rubber is used in the timing belts.

Our timing belts/flat belts are made of polyurethane (PU), neoprene, or SBR rubber. Plus the associated components such as nylon fabric and glass or steel tension cords.

The XPB V-belts are made of synthetic rubber—various elastomers such as ethylene propylene diene rubber (EPDM)

Other items such as machine feet, etc., are made of reinforced polyamide PA FV or, in lighter versions, polypropylene.
The anti-slip plates are made of NBR – NBR stands for nitrile butadiene rubber.
